

**INHIBITORS OF CYCLIN-DEPENDENT KINASES,
COMPOSITIONS AND USES RELATED THERETO**

ABSTRACT

5 The invention pertains to novel cyclin dependent kinase inhibitors (cdks) and
specifically, but not exclusively, as inhibitors of cdk/cyclin complexes. As described
herein, the inhibitors of this invention are capable of inhibiting the cell-cycle
machinery and consequently may be useful in modulating cell-cycle progression,
ultimately controlling cell growth and differentiation. Such compounds would be
10 useful for treating subjects having disorders associated with excessive cell
proliferation.
